

Model Number

UB400-F77-E2-V31

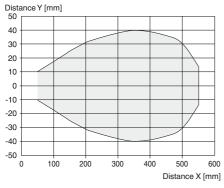

Ultrasonic direct detection sensor

Features

- Miniature design
- Program input
- · Degree of protection IP67
- Switching status indicator, yellow LED

Description of Sensor Function

The ultrasonic sensor transmits ultrasonic packets in quick succession and responds to their reflection off the detected object. The sensor has a switch output. The switching point is progammable (Teach-In). Objects beyond the taught-in switching point are not detected (background suppression).

Teach-In of Switching Point SP

To teach in a switching point, proceed as follows:

- 1. Connect the sensor and turn on the operating voltage.
- 2. Place the object to be detected at the required distance.
- Connect the teach-in input (ET) to $\,$ -U $_{\rm B}$. This can be done using the pushbutton or the controller
 - The LED will start flashing after 3 seconds to indicate that the sensor is ready to start the teach-in process ^(*).
- Disconnect the teach-in input (ET) with -U_B. The switching point SP has now been taught in $\ref{eq:teach}$.
- (*) If no object is detected within the sensing range of the sensor, the sensor will start flashing at a faster rate. The switching point remains unchanged.

Mounting instruction

If the sensor is operated at temperatures below 0 °C, use the supplied distance plate. Only use the two rearmost mounting holes (located opposite to the transducer) for mounting the sensor.

Safety Note

The use of this device in applications, where the safety of persons depends from the devices function, is not allowed!
