

Fiber-Optic Cable Sensor

ODX202P0008

Part Number

- Key potentiometer, teach-in
- Large detection and working range
- Recognition of transparent objects
- Reflex and through-beam operation mode are possible

wenglor fiber-optic cables are connected to these sensors. The easy to use teach-in function allows for fine sensor adjustment, so that even transparent objects can be reliably recognized in through-beam mode operation. The scanning width is automatically adapted to each individual application via external teach-in. The sensors can be easily mounted to standard DIN rails.
