

Model Number

BB10-P/59/76b/103/115e

Thru-beam sensor fixed cable with JST flat connector

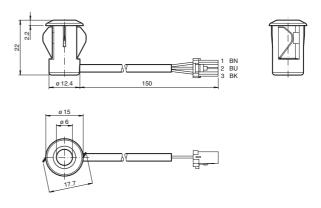

Features

- Single-beam miniature photoelectric sensor, ideal for installing in frames or contours
- · Integrated circuit
- Plug-in style housing for 13 mm hole
- Narrow opening angle, suitable for mounting in pairs
- Light on version
- · Version with test input

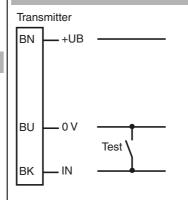

Product information

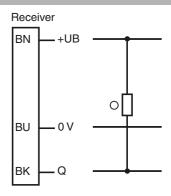

There is no simpler way of installing a sensor: drill the hole, clip in the sensor and you're done. What's more, the BB10 plug-in sensors for doors and turnstiles offer top performance at an extremely attractive price. The switching mechanism is integrated in the compact, self-contained and temperature-stable housing, making the BB10 suitable even for extremely cold regions with temperatures as low as -40°C.

Technical data			
System components			
Emitter		BB10-T/76b/115e	
Receiver		BB10-R/59/103/115e	
General specifications			
Effective detection range		0 6 m	
Threshold detection range		8 m	
Light source		IRED	
Light type		modulated infrared light , 880 nm	
Diameter of the light spot		approx. 1300 mm at a distance of 6 m	
Angle of divergence		Emitter: +/- 8 ° Receiver: +/- 10 °	
Optical face		frontal	
Ambient light limit		halogen light 100000 Lux; according to EN 60947-5-2:2007	
Accessories provided		none	
Functional safety related para	neters		
MTTF _d		795 a	
Mission Time (T _M)		20 a	
Diagnostic Coverage (DC)		0 %	
Indicators/operating means			
Function indicator		LED red: lights up when receiving the light beam; flashes when falling short of the stability control; OFF when light beam is interrupted	
Electrical specifications			
Operating voltage	U_B	10 30 V DC	
No-load supply current	I ₀	Emitter: ≤ 20 mA Receiver: ≤ 10 mA	
Input			
Test input		emitter deactivation at 0 V	
Output			
Switching type		dark on	
Signal output		1 PNP output, short-circuit protected, reverse polarity protected, open collector	
Switching voltage		max. 30 V DC	
Switching current		max. 100 mA	
Voltage drop	U_d	≤ 1.5 V DC	
Switching frequency	f	62.5 Hz	
Response time		8 ms	
Conformity			
Product standard		EN 60947-5-2	
Ambient conditions			
Ambient temperature		-40 60 °C (-40 140 °F) , fixed -20 60 °C (-4 140 °F) , movable	
Storage temperature		-40 70 °C (-40 158 °F)	
Relative humidity		90 % , noncondensing	
Mechanical specifications			
Degree of protection		IP67	
Connection		0.15 m cable with 3-pin JST connector Receiver: grey ; Emitter: black	
Material			
Material Housing		PC , black	
		PC , black Plastic pane	

Typical applications

- Monitoring function for turnstiles
- Activation function for restarting escalators
- Monitoring of industrial gates
- Person detection for automatic doors and

Curves/Diagrams

Operating principle

The thru-beam sensor requires two devices for operation; a light source and a light receiver. The light source and receiver must be optically aligned with one another in a single line. The infrared light emitted from the source is recorded by the receiver and evaluated.

The sensor detects both people and objects for as long as an object interrupts the detection beam, regardless of movement and surface structure.

Function

The Series BB10 thru-beam sensor requires a pair of devices for operation, comprising a light transmitter and a light receiver. The transmitter and receiver must be arranged in optical alignment with each other. The infrared light from the transmitter is detected by the receiver and evaluated.

The thru-beam sensor detects persons and objects independently of movement and surface structure for as long as the object breaks the detection beam.

		Electronic output
Light detection /25	Person in the beam	Inactive
	No person in the beam	Active
Dark detection /59	Person in the beam	Active
	No person in the beam	Inactive

Installation:

Thanks to its small dimensions, the light beam can be fitted in a U-profile or behind a face panel.

	Hole diameter [mm]		
Sheet thickness [mm]	13	13.5	
1	OK	Х	
2	OK	OK	
3	OK	OK	

X = Mounting not possible

OK = Mounting possible

Installation of twin-beam arrangement:

A twin-beam version requires 2 transmitters and receivers.

When using thru-beam sensors with the same transmission frequency:

Ensure that the minimum beam distance is 20 cm and that the light source and receiver are arranged in a cross formation.
