### **Distance sensor**

# OMT550-R201-IEP-IO-V31

CE 🚷 IO-Link

# **Model Number**

# OMT550-R201-IEP-IO-V31

Distance sensor with 4-pin, M8 x 1 connector

### **Features**

- Medium design with versatile • mounting options
- Space-saving distance sensors in ٠ small standardized design
- Multi Pixel Technology (MPT) exact • and precise signal evaluation
- IO-link interface for service and process data
- Analog output 4 ... 20 mA

### **Product information**

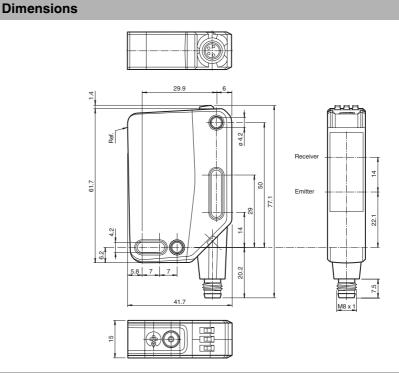

The optical sensors in the series are the first devices to offer an end-to-end solution in a medium-sized standard design-from the thru-beam sensor through to the measuring distance sensor. As a result of this design, the sensors are able to perform practically all standard automation tasks.

The entire series enables sensors to communicate via IO-Link.

The DuraBeam laser sensors are durable and can be used in the same way as a standard sensor.

Multi Pixel Technology (MPT) ensures that the standard sensors are flexible and can be adapted to the application

environment.

### **Electrical connection**

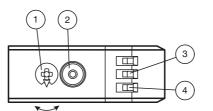

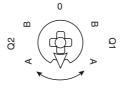

Wire colors in accordance with EN 60947-5-2 ΒN (brown) (white) WH BU BK (blue) (black)

Technical data				
General specifications				
Measurement range		100 550 mm		
Reference target		standard white, 100 mm x 100 mm		
Light source		LED		
Light type		modulated visible red light		
LED risk group labelling		exempt group		
Angle deviation		max. +/- 1.5 °		
Diameter of the light spot		approx. 20 mm at a distance of 550 mm		
Angle of divergence		2.5 °		
Ambient light limit		EN 60947-5-2 : 45000 Lux		
Resolution		0.1 mm		
Functional safety related parame	eters			
MTTF <sub>d</sub>		520 a		
Mission Time (T <sub>M</sub> )		20 a		
Diagnostic Coverage (DC)		0 %		
Indicators/operating means				
Operation indicator		LED green:		
		constantly on - power on flashing (4Hz) - short circuit flashing with short break (1 Hz) - IO-Link mode		
Function indicator		LED yellow: constantly on - switch output active constantly off - switch output inactive		
Control elements		Teach-In key		
Control elements		5-step rotary switch for operating modes selection		
Electrical specifications				
Operating voltage	UB	18 30 V DC		
Ripple	U	max. 10 %		
No-load supply current	l <sub>o</sub>	< 25 mA at 24 V supply voltage		
Protection class	.0			
Interface				
Interface type		IO-Link (via $C/Q = pin 4$ )		
Device profile		Identification and diagnosis		
Device prome		Smart Sensor type 0/type 3.3		
Transfer rate		COM 2 (38.4 kBaud)		
IO-Link Revision		1.1		
Min. cycle time		3 ms		
Process data witdh		Process data input 4 byte Process data output 2 bits		
SIO mode support		yes		
Device ID		0x111912 (1120530)		
Compatible master port type		A		
Output				
Switching type		The default setting is: C/Q - Pin4: NPN normally open, PNP normally closed, IO-Link I—Pin2: analog output 420 mA		
Signal output		1 push-pull output , 1 analog output , short-circuit-proof, reverse polarity protection, surge-proof		
Switching voltage		max. 30 V DC		
Switching current		max. 100 mA, resistive load		
Usage category		DC-12 and DC-13		
Voltage drop	U <sub>d</sub>	≤ 1.5 V DC		
Response time	Ud	≤ 1.5 V DC 2 ms , see table 1

CCC approval / marking not required for products rated ≤36 V

### Table 1: Information on Measured Value Filters

Measured value filter						
Filter	1-way	2-way	4-way	16-way	64-way	256-way
Response time (ms)	2	4	8	32	128	512
Repeatability (%)		<1%				

### Settings

### Teach-In (TI)

CCC approval

Use the rotary switch for switching signal Q1 to select the relevant switching threshold A and/or B to teach in.

· The yellow LEDs indicate the current state of the selected output.

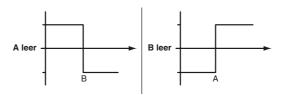

To teach in a switching threshold, press and hold the "TI" button for approximately 1 s, until the yellow and green LEDs flash in phase. Teach-in starts when the "TI" button is released.

• Teach-in successful: the yellow and green LEDs flash alternately at 2.5 Hz.

Teach-in unsuccessful: the yellow and green LEDs quickly flash alternately at 8 Hz.

After an unsuccessful Teach-in, the sensor continues to operate with the previous valid setting after the relevant visual fault signal is issued. Set switching mode: you can define different switching modes by teaching in the relevant distance data for switching thresholds A and B.

1. Single point mode:

2. Window mode:

Teach in switching thresholds: you can teach in or overwrite a taught-in switching threshold at any time. To do this, press the "TI" button again. Reset a value: you can reset a taught-in value. To do this, press the "TI" button for > 4 s, until the yellow and green LEDs go out. The reset

B >

process itself starts when the "TI" button is released.

• Reset successful: the yellow and green LEDs flash alternately at 2.5 Hz.

Minimum and maximum values for the analog output Q2 are taught in and deleted in the same way as those for the switching output.

The following applies:

A = Minimum voltage/current

B = Maximum voltage/current

#### **Resetting to Factory Settings**

To revert back to factory settings, press the "TI" button for > 10 s with the rotary switch set to position "O," until the yellow and green LEDs go out at the same time. The reset process itself starts when the "TI" button is released.

 Reset to factory settings successful: the yellow and green LEDs light up at the same time. The sensor then continues to operate with factory settings.

#### OMT-IEP

- · Factory setting for switching signal Q1:
- Switching signal is high active, window mode
- Analog output: current output, 4 mA ... 20 mA absolute mode
- OMT-UEP
- Factory setting for switching signal Q1:
- Switching signal is high active, window mode Analog output: voltage output, 0 V ... 10 V absolute mode

### Analog output

www.pepperl-fuchs.com

Refer to "General Notes Relating to Pepperl+Fuchs Product Information" Pepperl+Fuchs Group USA: +1 330 486 0001

Germany: +49 621 776 1111 fa-info@us.pepperl-fuchs.com

fa-info@de.pepperl-fuchs.com

Singapore: +65 6779 9091 fa-info@sg.pepperl-fuchs.com The analog output type can be configured as voltage or current output via IO-Link. The following output types are available:

- Analog output 0 mA ...20 mA
- Analog output 4 mA ...20 mA
- Analog output 0 V ...10 V

The following operating modes are available:

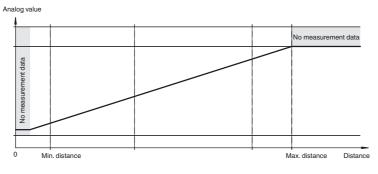

- Absolute mode (default setting)
- Normalized mode
- Rising slope
- Falling slope

The following substitute values can optionally be configured:

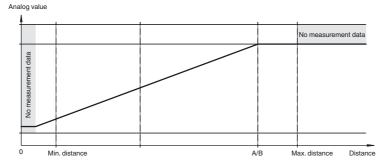

- No substitute values used (default setting)
- Substitute value for "no measured value" used
- · Substitute value for "no measured value" and "Measuring overrange" used

The sensor's tolerances are based on the digital process data.

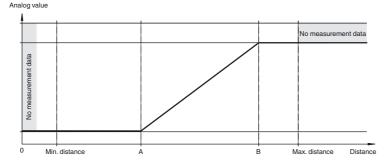

### Absolute mode (default setting, A and B = deleted)

### Normal mode ( A and B without teach-in / deleted)

### Rising slope (A < B)

### Falling slope (A > B)

### **Configuration via IO-Link interface**

### Setting different operating modes via the IO-Link interface

The devices are equipped with an IO-Link interface as standard for diagnostics and parameterization tasks to ensure optimum adjustment of the sensors to the relevant application.

### Single point mode operating mode (one switch point):

- "Detection of objects irrespective of type and color in a defined detection range. Objects in the background are suppressed.
- "The switch point corresponds exactly to the set point.

### Window mode operating mode (two switch points):

- Detection of objects irrespective of type and color in a defined detection range. Reliable detection when object leaves the detection range.
- Window mode with two switch points.

active detection range				
Foreground suppression	Background suppression			

datastis

### Center window mode operating mode (one switch point):

- Detection of objects irrespective of type and color in a defined detection range. Sets a defined window around a given object. Objects outside this window are not detected.
- Window mode with one switch point.
