Dimensions

Model Number

VDM28-8-L1/73c/136

Distance sensor with 4-pin, M12 x 1 connector

Features

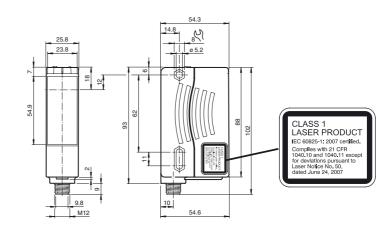

- Distance measurement using object ٠
- Measuring method PRT (Pulse ٠ Ranging Technology)
- Accurate, clear, and reproducible ٠ measuring results
- Red laser as the light emitter
- Laser class 1, eyesafe •

Product information

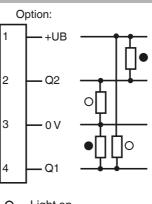

The VDM28 distance measurement device employs Pulse Ranging Technology (PRT). It has a repeat accuracy of 5 mm with an

operating range of 0.2 ... 8 m and an absolute accuracy of 25 mm.

The compact housing of the Series 28 photoelectric sensors, with dimensions of 88 mm (height), 26 mm (width) and 54 mm (depth), make it the smallest device available in its class.

Technical data			
General specifications			
Measurement range		0.2 8 m	
Reference target		Kodak white (90%)	
Light source		laser diode	
Light type		typ. service life 85,000 h at Ta = +25 °C	
Light type		modulated visible red light	
Laser nominal ratings Note		LASER LIGHT , DO NOT STARE INTO BEAM	
Laser class		1	
Wave length		660 nm	
Beam divergence		< 1.5 mrad	
Pulse length		approx. 4 ns	
Repetition rate		250 kHz	
max. pulse energy		< 1.5 nJ	
Angle deviation Measuring method		max. ± 2° Pulse Ranging Technology (PRT)	
Diameter of the light spot		< 10 mm at a distance of 8 m at 20 °C	
Ambient light limit		50000 Lux	
Temperature influence		typ. ≤ 0.25 mm/K	
Functional safety related param	eters		
MTTF _d		200 a	
Mission Time (T _M)		10 a	
Diagnostic Coverage (DC)		0 %	
Indicators/operating means			
Operation indicator Function indicator		LED green 2 LEDs yellow for switching state	
Teach-In indicator		Teach-In: LED green/yellow equiphase flashing; 2.5 Hz	
reach-in indicator		Teach Error:LED green/yellow non equiphase flashing; 8.0 Hz	
Control elements		5-step rotary switch for operating modes selection (threshold	
		setting and operating modes)	
Control elements		Switch for setting the threshold values	
Electrical specifications Operating voltage	U _B	10 30 V DC , class 2	
Ripple	OB	10 % within the supply tolerance	
No-load supply current	I ₀	\leq 125 mA / 24 V DC	
Time delay before availability	t _v	1.5 s	
Output			
Signal output		2 push-pull (4 in 1) outputs, short-circuit protected, reverse	
Switching voltage		polarity protected max. 30 V DC	
Switching voltage Switching current		max. 100 mA	
Switching frequency	,	50 Hz	
	f	30 HZ	
Response time	T	10 ms	
Response time Measurement accuracy	T		
Measurement accuracy Absolute accuracy	T	10 ms ± 25 mm	
Measurement accuracy Absolute accuracy Repeat accuracy	T	10 ms	
Measurement accuracy Absolute accuracy Repeat accuracy Ambient conditions	T	10 ms ± 25 mm < 5 mm

Curves/Diagrams

Preferences

Teach-In:

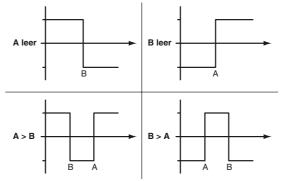

You can use the rotary switch to select the output **Q1** or **Q2** and the relevant switching threshold A or B for teaching in. The yellow LEDs indicate the current state of the selected output.

To store a switching threshold (distance measured value), press and hold the "SET" button until the yellow and green LEDs flash in phase (approx. 2 s). Teach-In starts when the "SET" button is released.

A successful Teach-In is indicated by rapidly alternating flashing (2.5 Hz) of the yellow and green LEDs.

An unsuccessful Teach-In is indicated by alternating flashing (8 Hz) of the yellow and green LEDs.

After an unsuccessful Teach-In, the sensor continues to operate with the previous valid setting after the relevant visual fault signal is issued. Different switching modes can be defined by teaching in the relevant distance measured values for the switching thresholds A and B:

Every taught-in switching threshold can be retaught (overwritten) by pressing the SET button again.

Pressing and holding the "SET" button for > 5 s completely deletes the taught-in value. The yellow and green LEDs go out simultaneously to indicate that this procedure has been completed.

Default setting:

In general, no switching points are set at the factory. The outputs are switched to low.

Reset to default settings:

- Set the rotary switch to the "RUN" position
- Press and hold the "SET" button until the yellow and green LEDs stop flashing in phase (approx. 10 s)
- If the green LED lights up, the procedure is complete.

Error messages:

- · Short circuit: In the event of a short circuit at the sensor output, the green LED flashes with a frequency of approx. 4 Hz.
- Teach error: In the event of a teach error, the yellow and green LEDs flash alternately with a frequency of approx. 8 Hz.

Note!

sensor.

The difference in the taught-in distance measured values for the switching thresholds A and B must be greater than the switching hysteresis set in the

On delivery, the switching hysteresis is 15 mm.

If the difference in the taught-in measured values is the same as or smaller than the set switching hysteresis, the sensor will visually signal an unsuccessful Teach-In. The last distance measured value that was taught in will not be adopted by the sensor.

Select a new distance measured value for switching threshold A or B with a greater difference between the switching thresholds. Teach in this distance measured value on the sensor again.

Laser notice laser class 1

- The irradiation can lead to irritation especially in a dark environment. Do not point at people!
- Maintenance and repairs should only be carried out by authorized service personnel!
- Attach the device so that the warning is clearly visible and readable.
- Caution Use of controls or adjustments or performance of procedures other than those specified herein may result in hazardous radiation exposure.
