# 1 Preliminary note

The instructions are part of the unit. They are intended for authorised persons according to the EMC, Low Voltage and Machinery Directives and safety regulations.

The instructions contain information about the correct handling of the product. Read the instructions before use to familiarise yourself with operating conditions, installation and operation.

Adhere to the safety instructions.

## 1.1 Symbols used

► Instructions

> Reaction, result

→ Cross-reference

○ LED off

● LED on

☒ LED flashes

☀ LED flashes quickly

 Important note

Non-compliance can result in malfunction or interference.

 Information

Supplementary note.

## 2 Safety instructions

- Follow the operating instructions.
- Improper use may result in malfunctions of the unit. This can lead to personal injury and/or damage to property during operation of the machine. For this reason note all remarks on installation and handling given in these instructions. Also adhere to the safety instructions for the operation of the whole installation.
- In case of non-observance of notes or standards, specially when tampering with and/or modifying the unit, any liability and warranty is excluded.
- The unit must be installed, connected and put into operation by a qualified electrician trained in safety technology.
- The applicable technical standards for the corresponding application must be complied with.
- For installation the requirements according to EN 60204 must be observed.
- In case of malfunction of the unit please contact the manufacturer. Tampering with the unit is not allowed.
- Disconnect the unit externally before handling it. Also disconnect any independently supplied relay load circuits.
- After setup the system has to be subjected to a complete function check.
- Only use the unit under the specified operating conditions (→ 10 Technical data). In case of special operating conditions please contact the manufacturer.
- Use only as described below (→ 4).

UK

### **3 Items supplied**

- 1 G1501S safety relay including 5 Combicon connectors with screw terminals
- 1 copy of the operating instructions safety relay

If one of the above-mentioned components is missing or damaged, please contact one of the ifm branch offices.

### **4 Functions and features**

The safety relay is a redundant system and suited for use as:

- Safety relay for fail-safe sensors/switches with 2 PNP outputs (e.g. GM701S).
- Safety relay for clocked fail-safe sensors (e.g. GM504S)
- Relay for two-hand control to EN 574 and EN ISO 13851 with electronic sensors/switches
- Relay for two-hand control to EN 574 and EN ISO 13851 with mechanical switches / safety relay for mechanical switches or 2-channel fail-safe sensors/switches (e.g. ESPE to EN 61496-1) with contact output with simultaneity monitoring
- Safety relay for mechanical switches or 2-channel fail-safe sensors/switches (e.g. non-contact safety devices EN 61496-1) with contact output and without simultaneity monitoring (indefinite simultaneity)

ifm electronic gmbh assumes no liability for the use of units made by external manufacturers.

The safe state is when the output contacts (13-14 or 23-24) are open.

The safety relay G1501S was tested and certified by TÜV-Nord.

## **4.1 Requirements for the hardware configuration**

The following requirements must be complied with when using the safety relay G1501S:

### **4.1.1 Product-independent requirements**

It must be ensured that the safety requirements of the respective application correspond to the requirements stated in these instructions.

The specified technical data indicated in these instructions must be complied with. The principle of normally closed operation must be applied to all external safety circuits connected to the system.

By taking administrative measures in the application it must be ensured that

- the safety relays type G1501S in operation are subjected to a self-test (switching off) within a period of maximum 1 month (intermittent operation)
- the safety-related relay contacts are protected using a suitable fuse of 3.6 A as short-circuit / overload protection.

The self-test can be carried out by switching the supply voltage off and on or by a safety request.

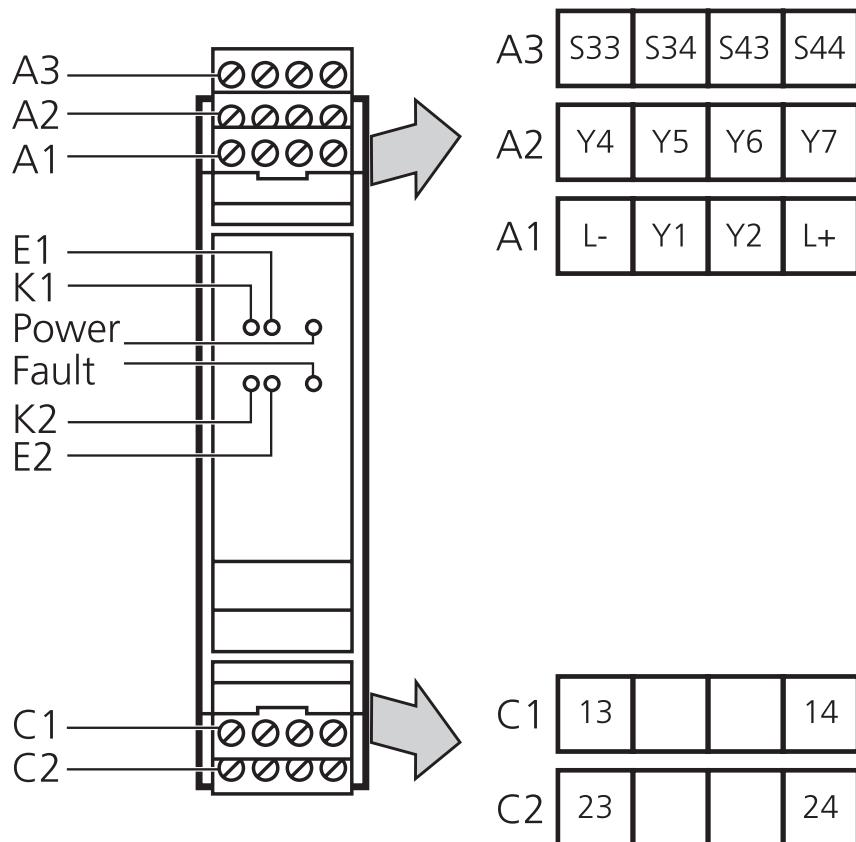

### **4.1.2 Product-dependent requirements**

In case of faults within the safety relay which result in the defined safe state, the safety relay must be replaced.

Any faulty unit should be returned to the manufacturer.

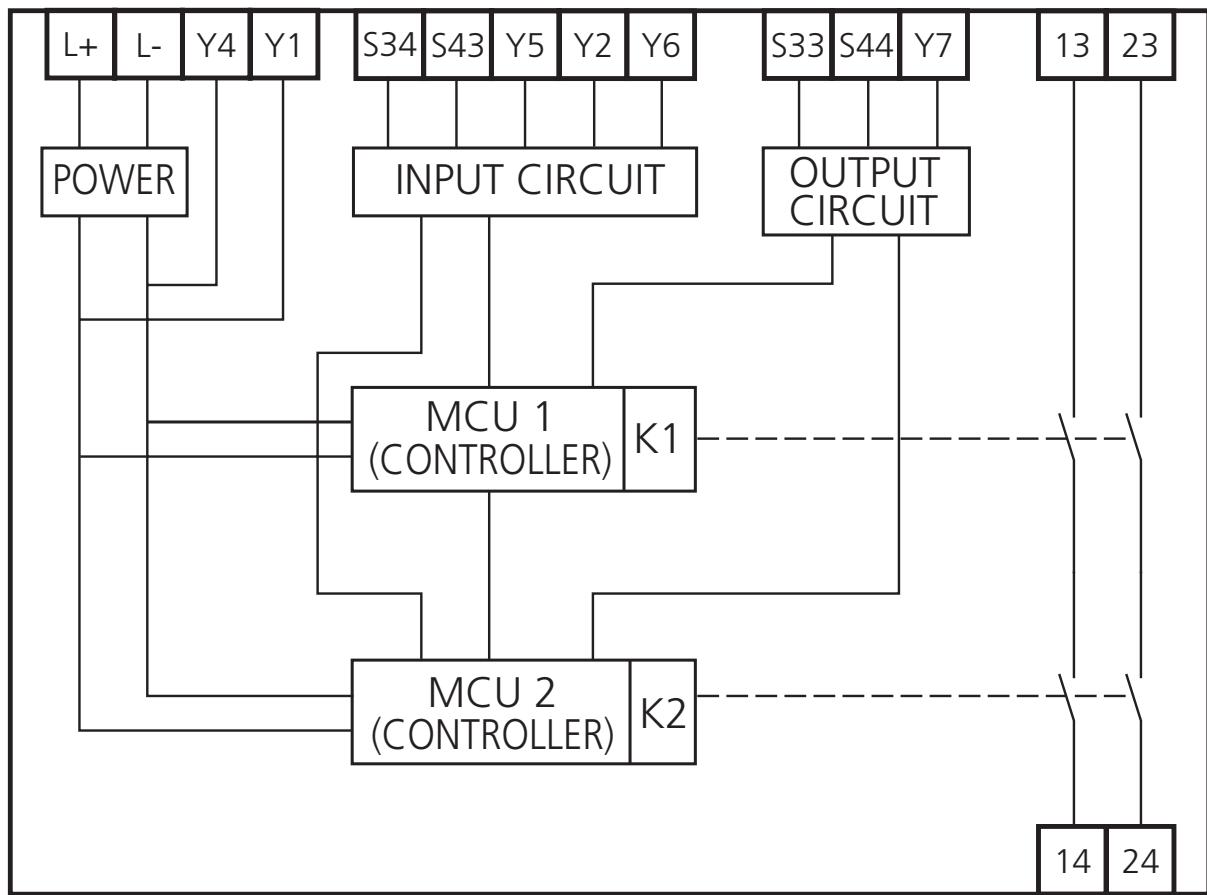

# 5 Structure and operating principle

## 5.1 Indicators and connections

A1	Supply voltage (L-, L+), function terminals (Y1, Y2)
A2	Y4, Y5, Y6, Y7: Operating mode selection, auxiliary output
A3	S33, S34, S43, S44: Connection for safety inputs / outputs
K1	LED yellow: Triggering of the relay output channel 1
K2	LED yellow: Triggering of the relay output channel 2
E1	LED yellow: Input signal channel 1 or TE (for clocked sensor)
E2	LED yellow: Input signal channel 2 or A (for clocked sensor)
Power	LED green: Voltage supply
Fault	LED red: Fault/start-up
C1	13, 14: Connection of relay output without delay, 1 x normally open (closed when enabled)
C2	23, 24: Connection of relay output, 1 x normally open (closed when enabled)

## 5.2 Block diagram

UK

## 6 Installation

- ▶ Mount the unit on a DIN rail in a housing protected against dust and humidity (min. IP54 - degree of soiling 2).

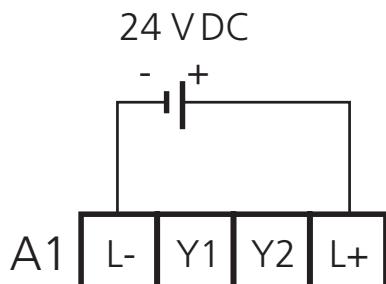

## 7 Electrical connection

- ▶ Use 60/75°C copper conductors only.

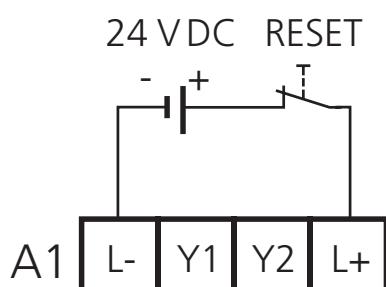

### 7.1 Supply voltage

 The external supply unit must have a safe separation. In case of a fault the voltage can exceed the value of 60 V DC for a maximum of 200 ms, but must not exceed the value of 120 V DC.

- ▶ Connect supply voltage

### Manual reset

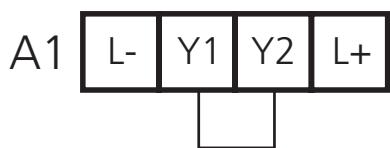

For safety reasons the unit can only be restarted by separation from the supply voltage in case of a fault. It is thus recommended to install a RESET switch in series with the L+ circuit.

After power on or a RESET the unit carries out self diagnostic functions. After this self diagnosis the unit is ready for operation.

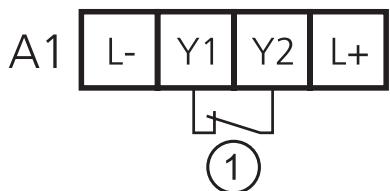

## 7.2 Feedback contacts / monitored or automatic start

### Automatic start

Automatic activation without monitoring.

### Monitoring of the feedback contacts (normally closed) for automatic start

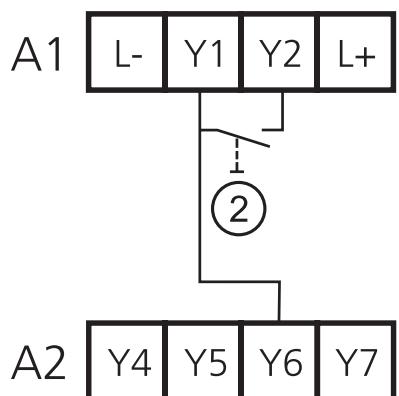

The circuit is enabled when the feedback contacts are closed.

Consider the current flowing through the feedback contacts (→ 10 Technical data).

1: Feedback contact

### Monitored start

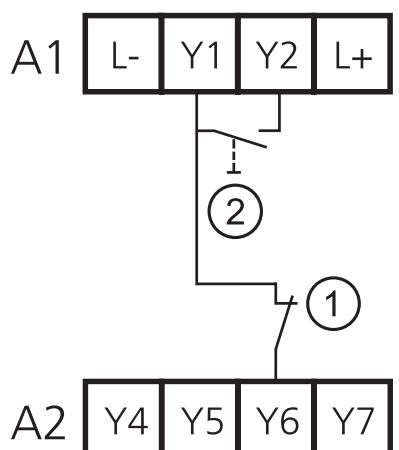

Activate the relay outputs:

- ▶ Press and release the start button (> 50 ms).

This function is not active when used as two-hand control.

2: Start button

### Monitoring of the feedback contacts (normally closed) for monitored start

Activate the relay outputs:

Feedback contacts are closed

- ▶ Press and release the start button (> 50 ms).

This function is not active when used as two-hand control.

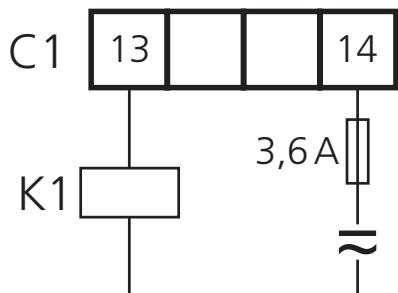

Consider the current flowing through the feedback contacts (→ 10 Technical data).

1: Feedback contact

2: Start button

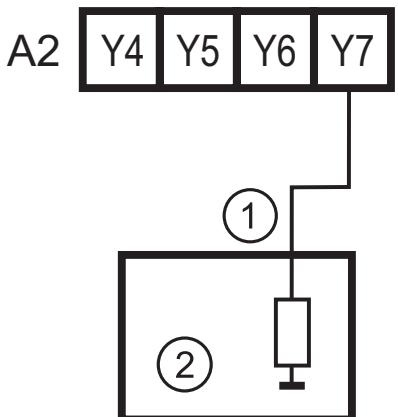

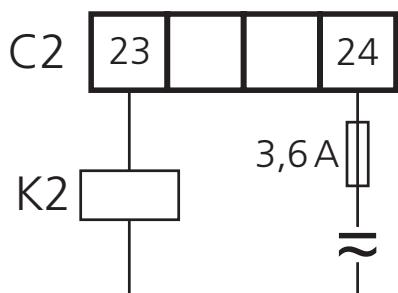

## 7.3 Output circuit

### Connect the load

Connect the load to be controlled to the outputs C1 (13-14) or C2 (23-24).

Adhere to the maximum and minimum load conditions (→ 10 Technical data).

Output Y7 provides a non-safety related signal for communication to a plc. The signal corresponds to that triggering the relays at the outputs 13/14 and 23/24. The output data is compatible with the input data of the current-sinking inputs of type 1, 2, 3 to EN 61131-2.

1: Input

2: PLC

## 8 Connection - Function - Fault diagnosis

The safety relay can be connected or used in different ways:

1. Safety relay for fail-safe sensors/switches with 2 PNP outputs (e.g. GM701S).
2. Safety relay for clocked fail-safe sensors (e.g. GM504S)
3. Relay for two-hand control to EN 574 and EN ISO 13851 with electronic sensors/switches.
4. Relay for two-hand control to EN 574 and EN ISO 13851 with mechanical switches / safety relay for mechanical switches or 2-channel fail-safe sensors/switches (e.g. ESPE to EN 61496-1) with contact output with simultaneity monitoring.
5. Safety relay for mechanical switches or 2-channel fail-safe sensors/switches (e.g. non-contact safety devices EN 61496-1) with contact output and without simultaneity monitoring (indefinite simultaneity).

UK

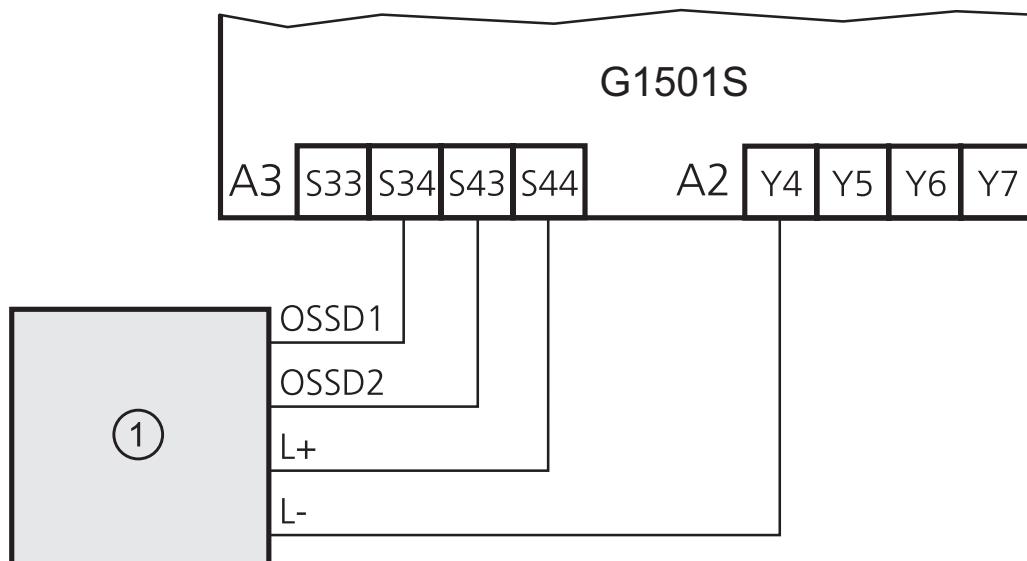

## 8.1 Safety relay for fail-safe sensors/switches with 2 PNP outputs

Example of fail-safe sensors/switches:

- Fail-safe inductive sensor GM701S
- Light barrier
- Light curtain (ESPE to EN 61496-1)
- Laser scanner

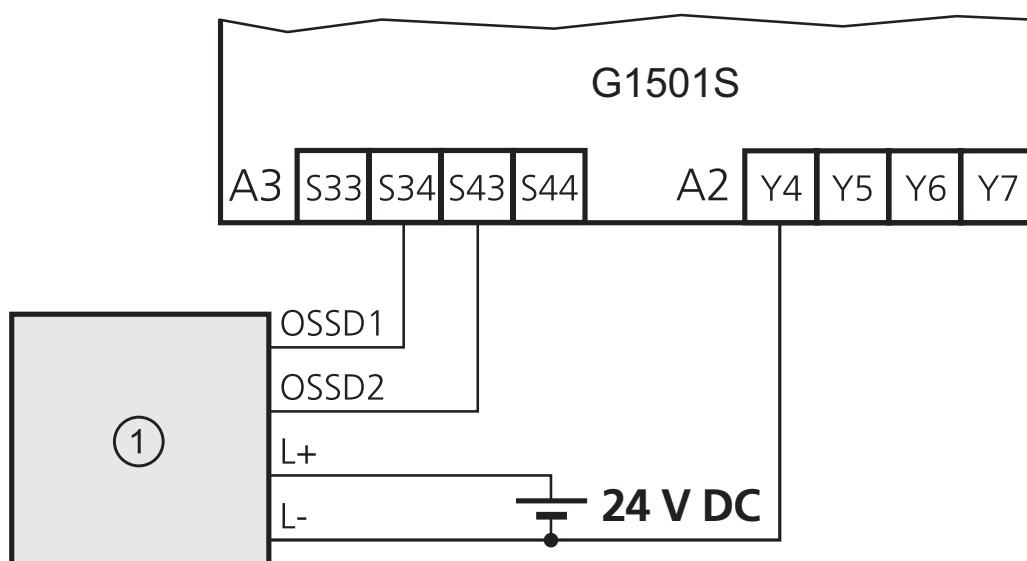

### 8.1.1 Connection

**Fail-safe sensor/switch with a current consumption of  $\leq 50 \text{ mA}$ :**

1: Fail-safe sensor/switch

**Fail-safe sensor/switch with a current consumption of  $> 50 \text{ mA}$ :**

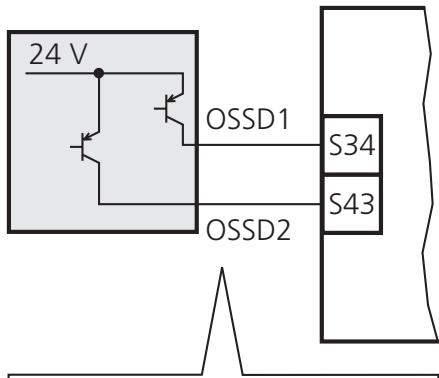

1: Fail-safe sensor/switch

## 8.2 Safety relay for clocked fail-safe sensors

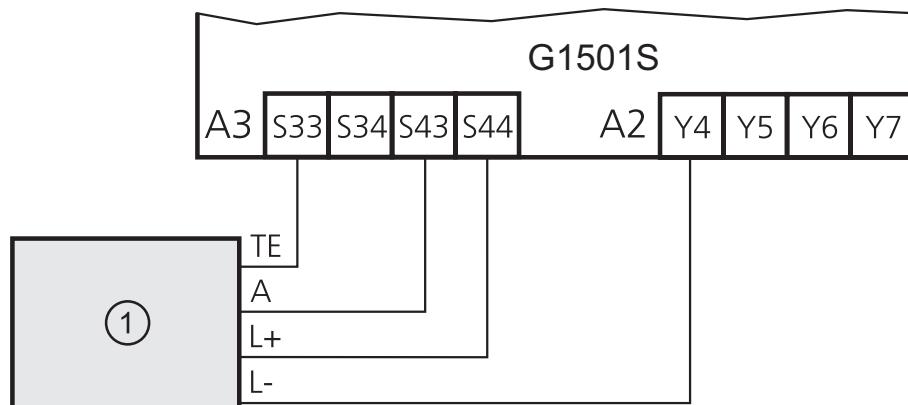

Example of fail-safe sensors/switches:

- Fail-safe inductive sensor GM504S

Up to 10 clocked fail-safe sensors can be connected to one safety relay.

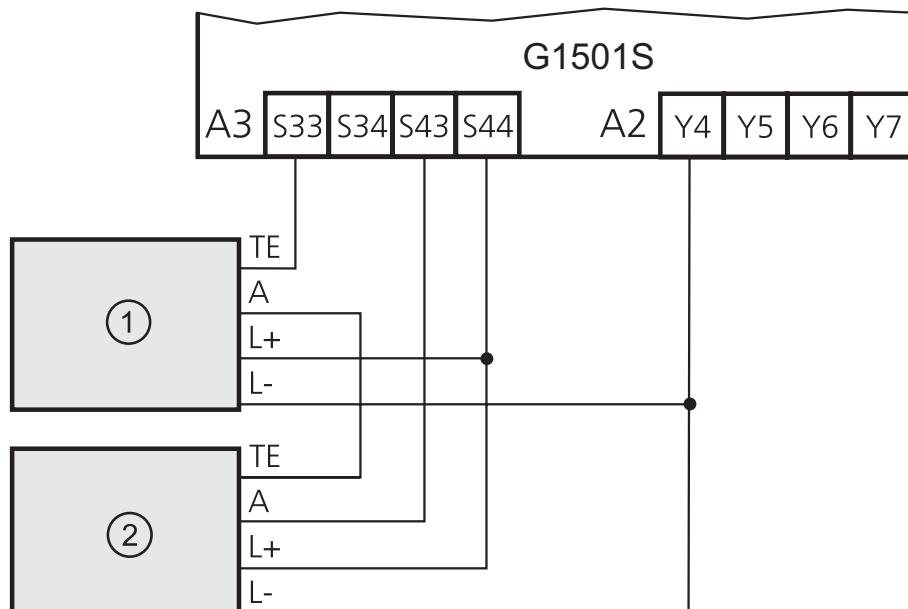

### 8.2.1 Connection

Connection of one fail-safe sensor/switch:

1: Fail-safe sensor/switch

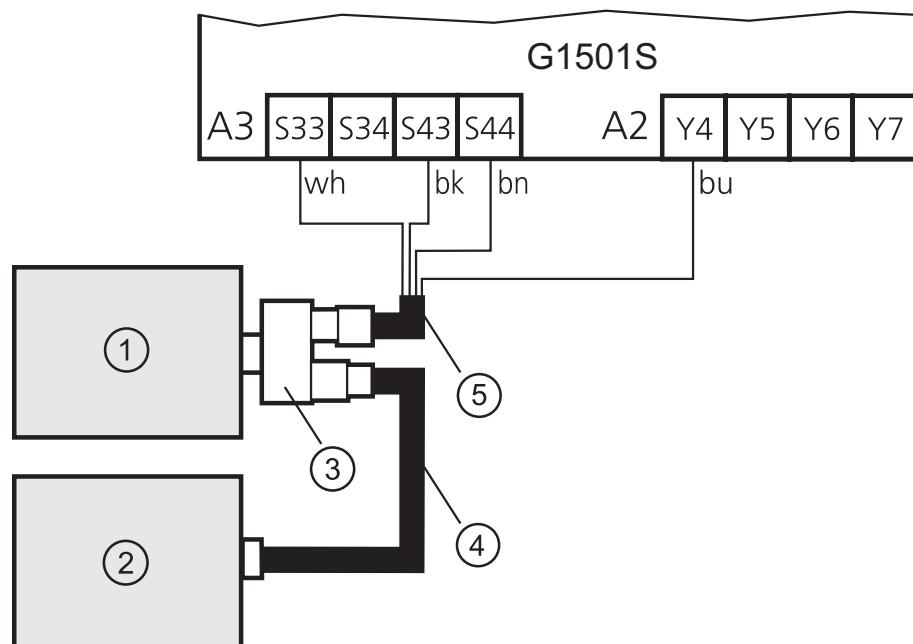

Connection of 2 fail-safe sensors/switches:

1: Fail-safe sensor/switch 1

2: Fail-safe sensor/switch 2

The use of the safety splitter box E11569 is recommended:

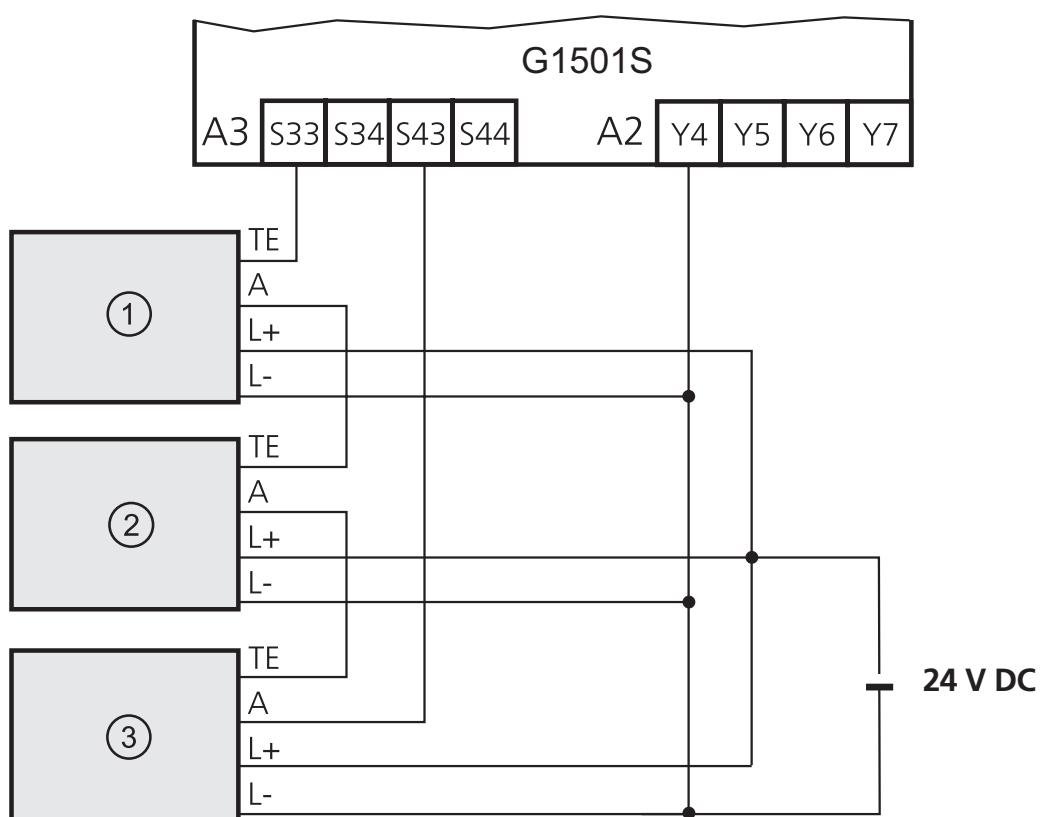

- 1: Fail-safe sensor/switch 1
- 2: Fail-safe sensor/switch 2

- 3: E11569
- 4: e.g. EVC014
- 5: e.g. EVC001

wh = white  
bk = black  
bn = brown  
bu = blue

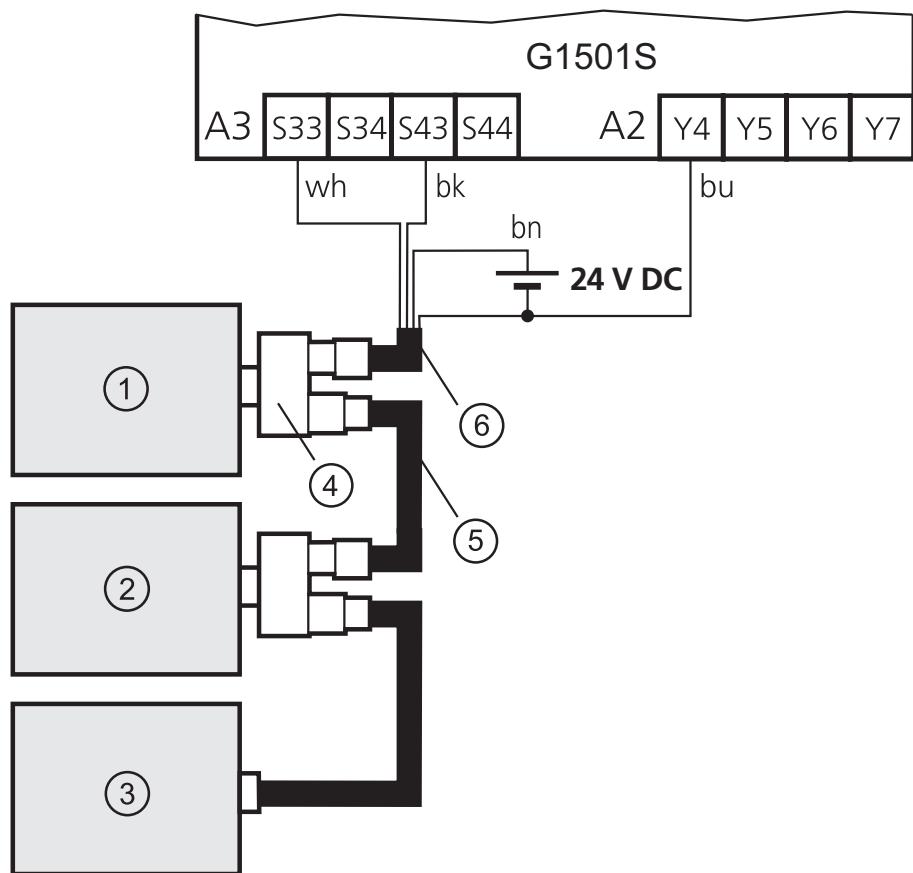

### Connection of 3 to 10 fail-safe sensors/switches:

- 1: Fail-safe sensor/switch 1
- 2: Fail-safe sensor/switch 2

- 3: Fail-safe sensor/switch 3

The use of the safety splitter box E11569 is recommended:

- 1: Fail-safe sensor/switch 1
- 2: Fail-safe sensor/switch 2
- 3: Fail-safe sensor/switch 3

- 4: E11569
- 5: e.g. EVC014
- 6: e.g. EVC001

wh = white  
bk = black  
bn = brown  
bu = blue

## 8.2.2 Function

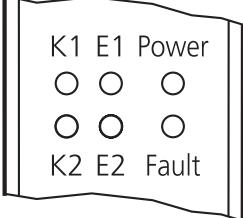

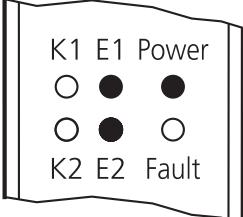

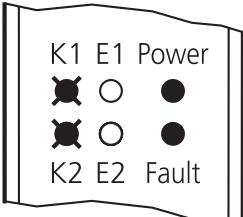

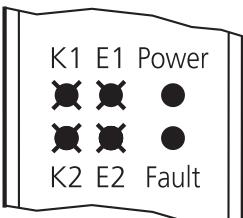

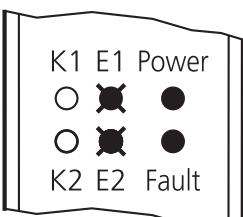

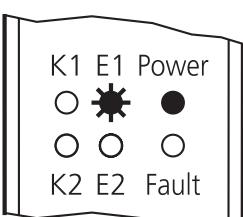

Input circuit	Output status	LED display

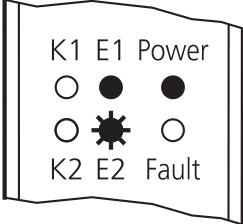

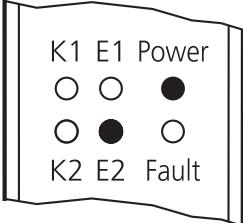

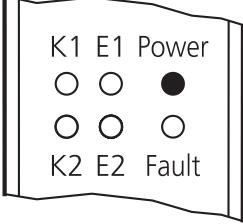

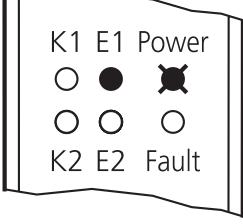

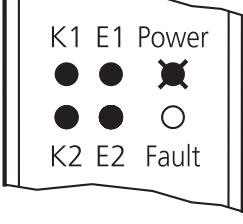

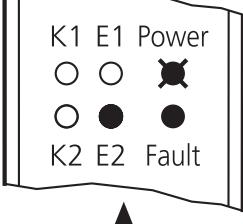

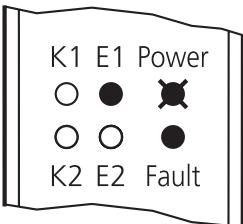

1: First or last fail-safe sensor/switch of a row of sensors/switches  
 2:  $td = \text{max. } 16 \text{ ms}$

### 8.2.3 Fault diagnosis

In case of a fault switch the safety relay off and on again!

LED display	Cause of the fault	Troubleshooting

## 8.3 Relay for two-hand control using electronic sensors/switches

Example of electronic sensors/switches:

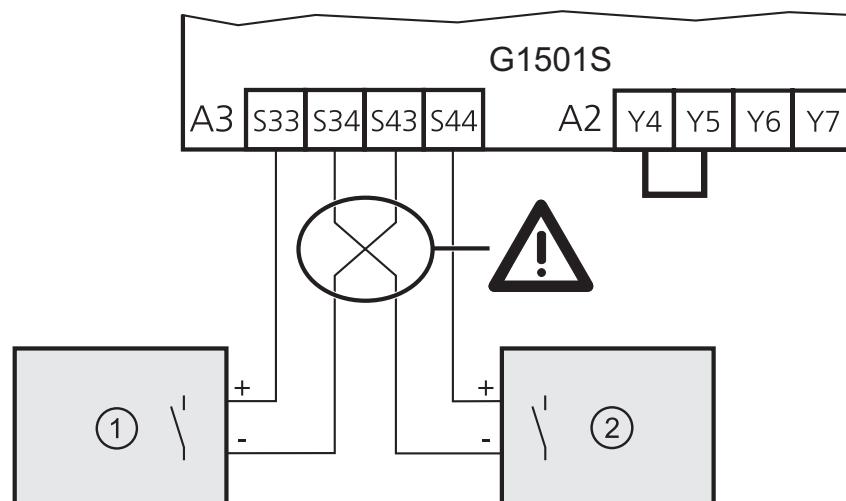

- Capacitive sensors

For product selection see [www.ifm.com](http://www.ifm.com)

This wiring meets the requirements type IIIB to EN 574 and EN ISO 13851. Use up to type IIIC is possible using corresponding sensors/switches with two independent switching elements, internal plausibility check and protected or screened wires.

### 8.3.1 Connection

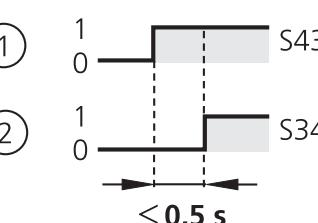

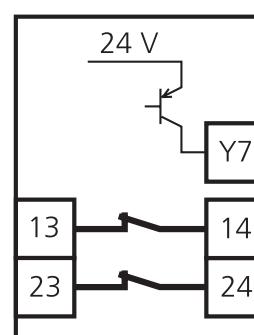

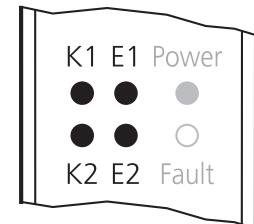

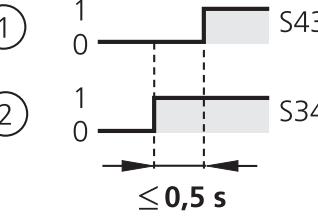

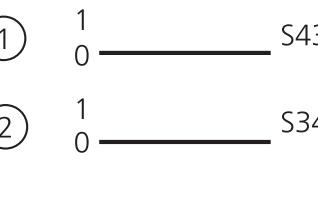

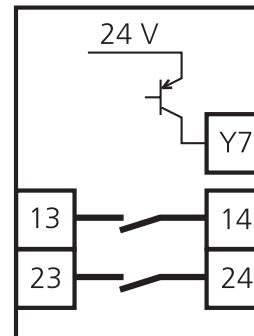

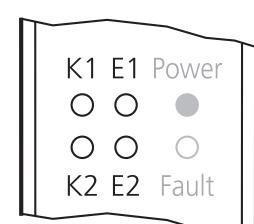

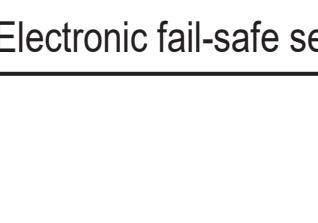

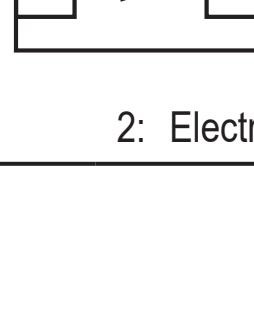

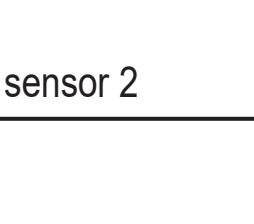

Connection of two 2-wire DC:

1: Electronic fail-safe sensor 1

2: Electronic fail-safe sensor 2

## 8.3.2 Function

## 8.4 Relay for two-hand control using mechanical switches with simultaneity monitoring

Two-hand control with mechanical switches / safety relay for mechanical switches or 2-channel fail-safe sensors/switches with contact output with simultaneity monitoring.

 The contacts of the mechanical switches must allow a minimum current of 6 mA.

### 8.4.1 Connection

#### Connection of two mechanical fail-safe switches

This wiring (with only one normally open contact per sensor/switch) meets the requirements of type IIIB to EN 574 and EN ISO 13851.

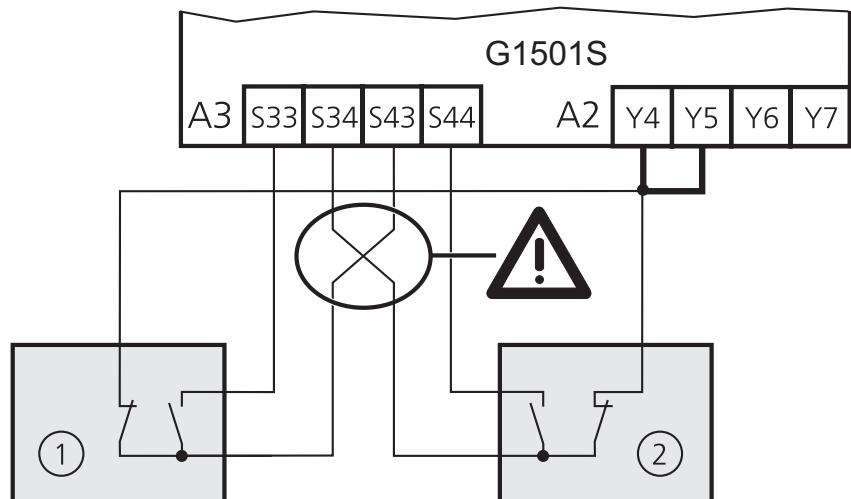

Use up to type IIIC is possible using corresponding sensors/switches approved to EN 60947-5-1 annex K and protected or screened wires.

1: Mechanical fail-safe switch 1

2: Mechanical fail-safe switch 2

## Connection of mechanical switches according to type IIIC to EN 574 and EN ISO 13851

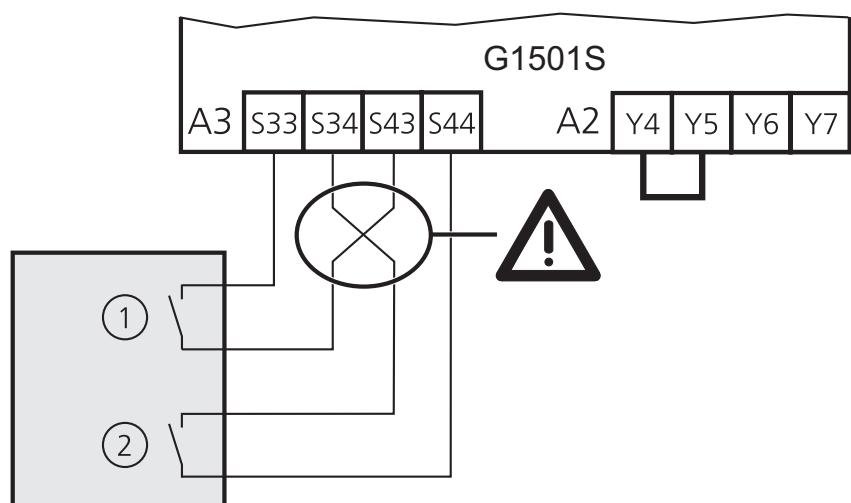

1: Mechanical switch 1 (no positively driven contacts)

2: Mechanical switch 2 (no positively driven contacts)

## Connection of a 2-channel fail-safe sensor/switch

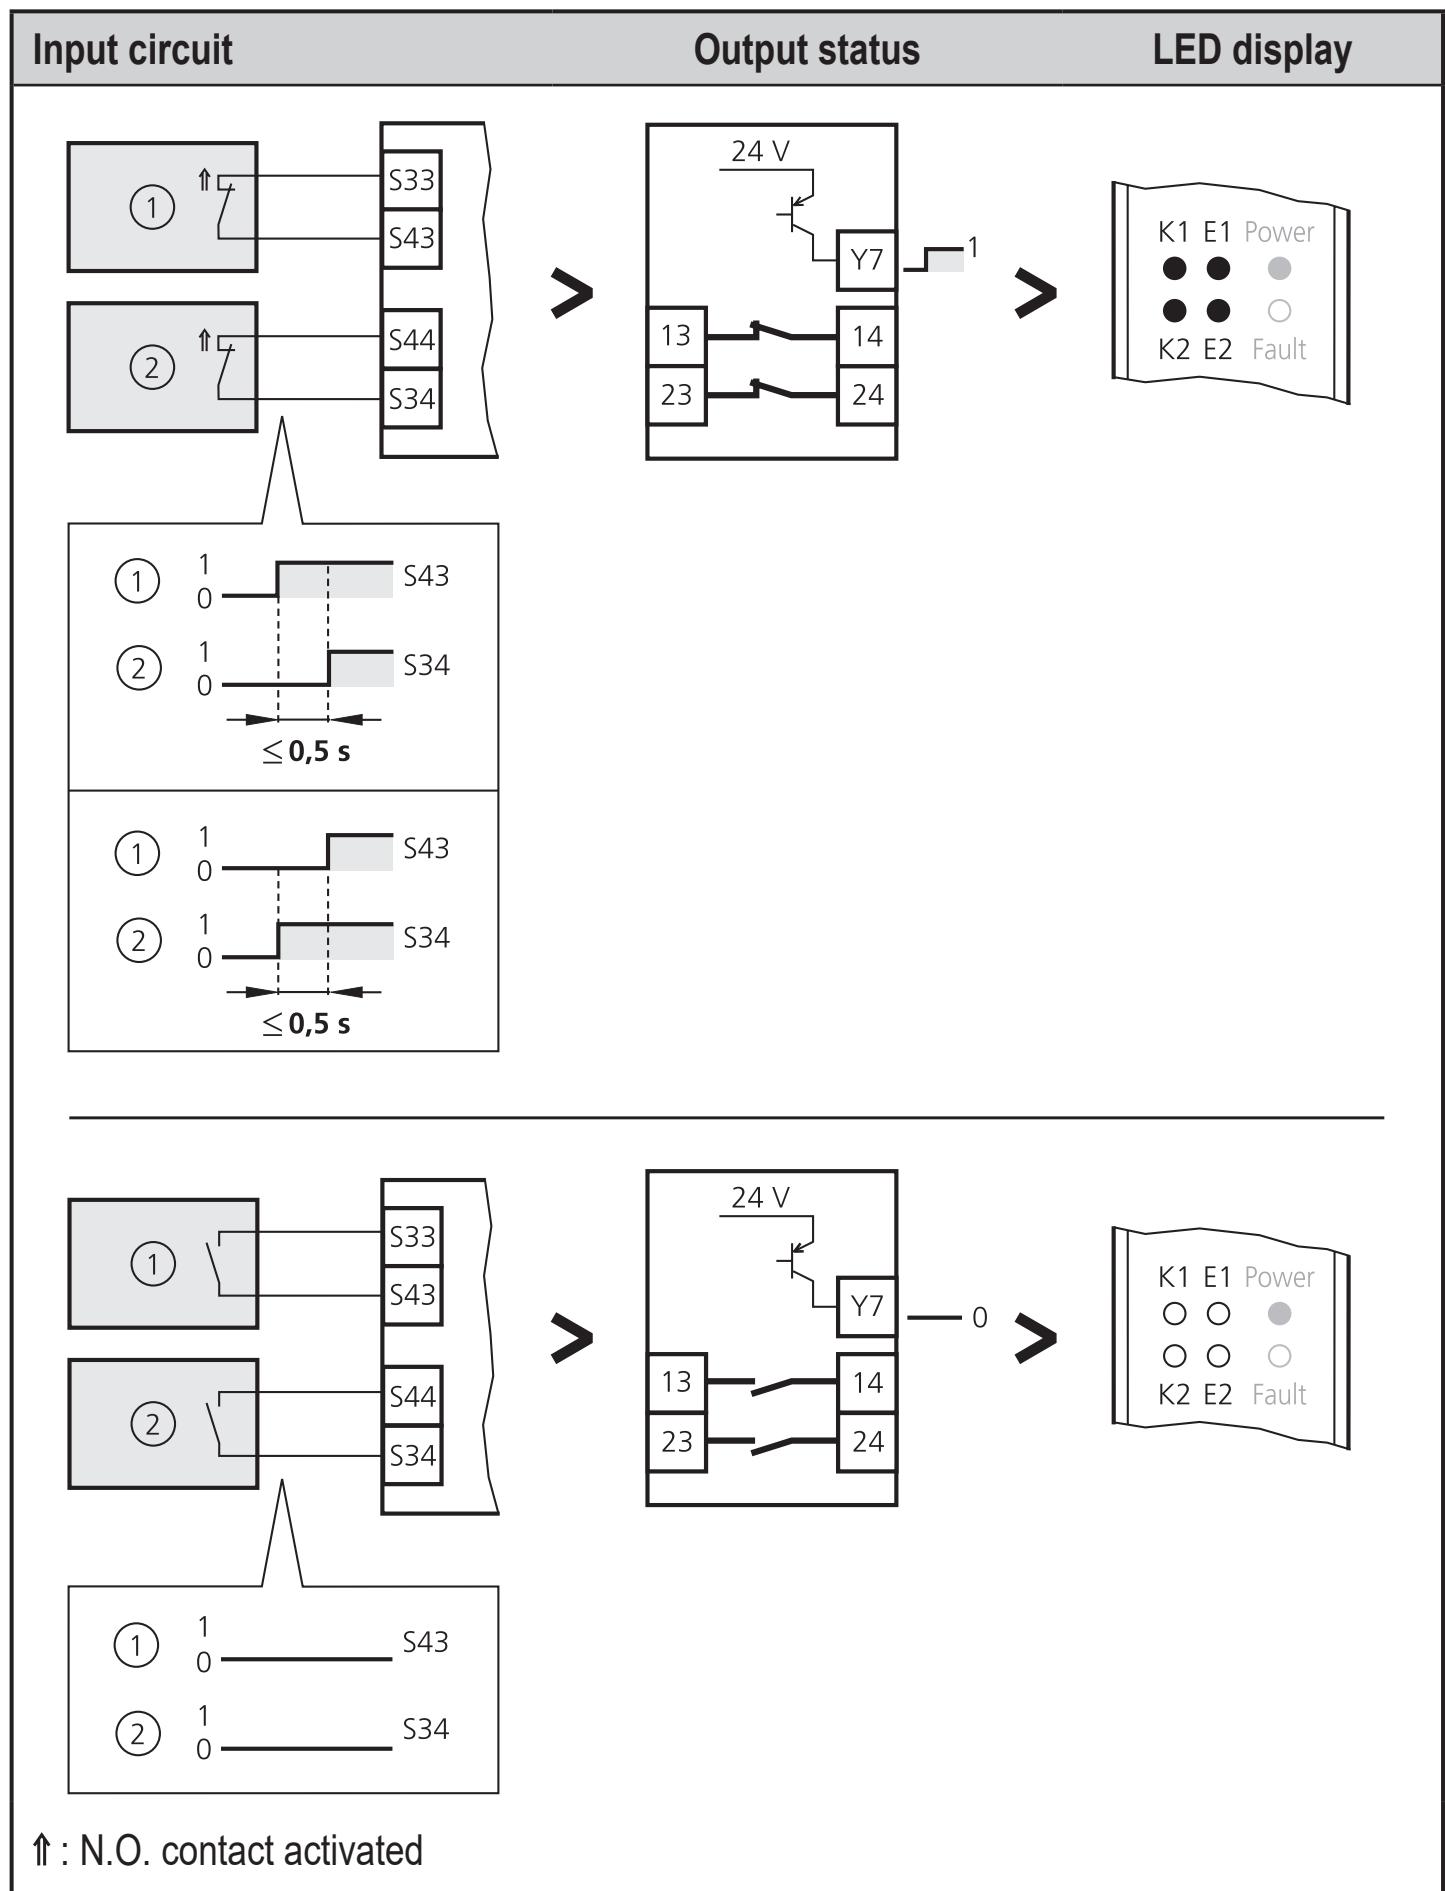

e.g. "electro-sensitive protective equipment" (ESPE) to EN 61496-1

1: Contact 1 of the ESPE

2: Contact 2 of the ESPE

## 8.5 Safety relay for mechanical switches or 2-channel fail-safe sensors/switches with contact output and without simultaneity monitoring

The 2-channel fail-safe sensors/switches are for example "electro-sensitive protective equipment" (ESPE) to EN 61496-1.

-  The contacts of the sensors/switches must allow a minimum current of 6 mA.

### 8.5.1 Connection

## 10 Technical data

### G1501S

Safety relay with relay outputs

Terminal block Phoenix Contact MSTBO

Meets the requirements of:

EN ISO 13849-1:2015, category 4 PL e, SIL 3 (IEC 61508)

Electrical design	Relay
Output function	2 safety-related NO (floating contacts) 1 signal output (positive switching)
Operating voltage	24 V DC (19.2...30) incl. 5 % residual ripple
Contact rating	6 A, 250 V AC / 24 V DC (min 6 mA)
Short-circuit protection / overload protection	The contacts are to be protected by means of fuses with a nominal current of < 3.6 A
Current consumption	< 200 mA
Function display	voltage (green), error (red), output status (2 x yellow), input (2 x yellow)

Power-on delay time	< 6 s				
Response time [ms]	acc. to input circuit → chapter				
	8.1	8.2	8.3	8.4	8.5
Release	40	160	40	110	110
Safety requirement	30	180	30	30	30
Ambient temperature	-25...55°C				
Protection rating	IP 20				
Housing materials	PA				
Input characteristics (S34, S43)	"1": > 11 V, 6 mA "0": < 5 V, < 500 µA				
Output characteristics	S33 push-pull short-circuit proof "0": $I_{sink} \sim 30 \text{ mA}$ "1": $I_{source} \geq 50 \text{ mA}, U > 18 \text{ V}$ S44 "0": $I_R \leq 300 \mu\text{A}$ "1": $I_{source} \geq 50 \text{ mA}, U > 18 \text{ V}$ Y7 "0": $I_R \leq 300 \mu\text{A}$ "1": $I_{source} \geq 11 \text{ V} @ 30 \text{ mA}, \geq 15 \text{ V} @ 15 \text{ mA}$				
Current through feedback contacts (Y1-Y2 or Y1-Y6)	6 mA				
Mission time $T_M$ (Mission time)	175 200 h				
$PFH_D$	$2.2 \times 10^{-9} / \text{h} ^*)$				
$B10_D$	max. 780 000				
Comments	Additional comments concerning the cULus approval (UL 508): <ul style="list-style-type: none"> <li>• Maximum ambient temperature 55°C (in the control cabinet)</li> <li>• The safety functions were not assessed by UL. The approval has been made according to UL 508 for general applications.</li> <li>• Use 60/75°C copper conductors only.</li> <li>• For use in pollution degree 2 environment</li> <li>• Same polarity (phase) referred to the output contacts</li> </ul> <p style="margin-left: 20px;">*) with <math>h_{op} = 24 \text{ h}, d_{op} = 365 \text{ days}, t_{cycle} = 8640 \text{ s}</math></p>

## 11 Terms and abbreviations

ESPE		Electro-Sensitive Protective Equipment
Cat.	Category	Category Classification of the safety-related parts of a controller as regards their resistance to failures
CCF	Common Cause Failure	Common cause failure
DC	Diagnostic Coverage	Diagnostic coverage
MTTF	Mean Time to Failure	Mean time to failure
MTTF <sub>D</sub>	Mean Time To Dangerous Failure	Mean time to dangerous failure
OSSD	Output Signal Switching Device	Switching output triggering the safety circuit
PFH (PFH <sub>D</sub> )	Probability of (dangerous) Failure per Hour	Probability of a (dangerous) failure per hour
PL	Performance Level	PL to EN ISO 13849-1
SIL	Safety Integrity Level	SIL 1-4 to IEC 61508
PLC		Programmable Logic Controller
